

#### ABSTRACT OF THE INVENTION

The present invention provides a biodegradable polyester resin composition having excellent antistatic ability, wherein the antistatic ability is provided to biodegradable resins such as polyester polymer or resin, in particular, polylactic acid and films, sheets and molded articles. In the biodegradable polyester resin composition of the invention, the combined ratio of (A) glycerin mono fatty acid ester and (B) alkyl sulfonate as antistatic agents is 0.2 ~ 5 weight parts in relation to 100 weight parts of biodegradable polyester resin.
